## The LEADER in solids-processing valves

### The Greatest Experience!

*Founded in the 19th century. Developed in the 20th century. Excelling in the 21st century.*

For four generations, Gemco has successfully solved tough solids-processing applications where other equipment has failed.

### The Best Products!

*Standard and engineered products for the widest range of your applications.*

From our basic dust-tight to our most sophisticated High Performance models Gemco Valve offers the widest range of sizes, material of construction, finishes and control options, more than anyone else in the industry.

Our valves, airlocks, diverter valves, and retractable sleeves have been meeting the demand for products that control the flow of solids and slurries for four generations. Companies like 3M, Pfizer, Kraft, Dow, and GE rely on our valves in critical processing environments.

### The Finest Service!

*State of the art web site. Knowledgeable staff. Expert field service.*

Investment in technology has allowed us to improve our products and work even more closely with our customers. Our website, converter app, videos, manuals and specification drawings, along with on-site visits, are ways we support our clients during and after their purchase.

**Visit [GemcoValve.com](http://GemcoValve.com)** More than an online catalog, it is a resource that allows you to interact with Gemco Valve. Our site is designed with application engineers and processing practitioners in mind, with features like printable specification drawings, guidance on valve selection, converter app, spec your valve interactive form, request quote form and much more.
